Security by Design

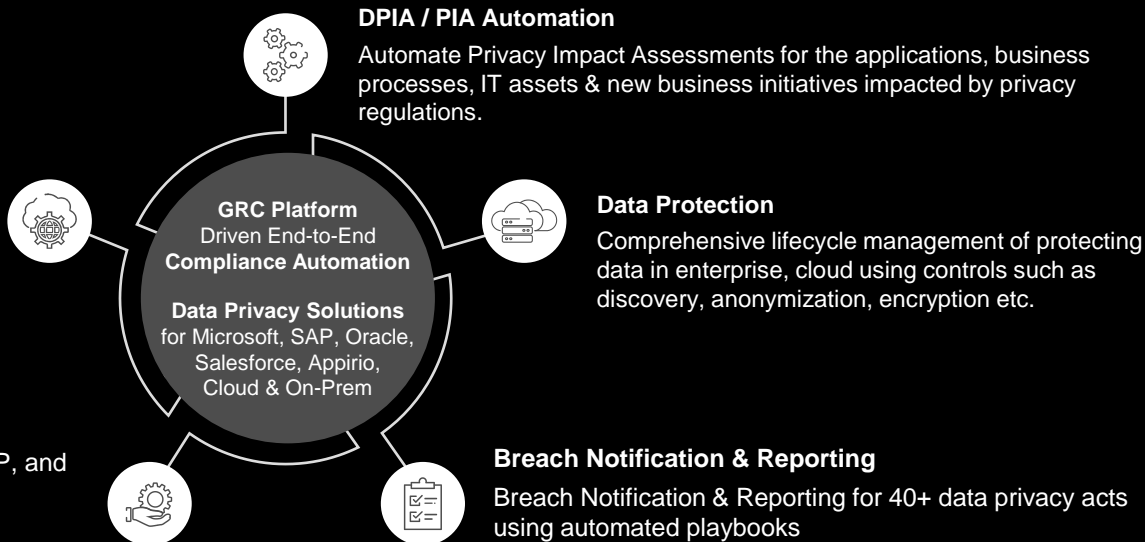

Wipro's Data Privacy Solutions

Data Privacy Inventory

Single Source of Truth for personal data processing

Individual Rights Management

Automate Individual Rights Management across ERP, and other enterprise systems using orchestration and automation engine.

DPIA / PIA Automation

Automate Privacy Impact Assessments for the applications, business processes, IT assets & new business initiatives impacted by privacy regulations.

Data Protection

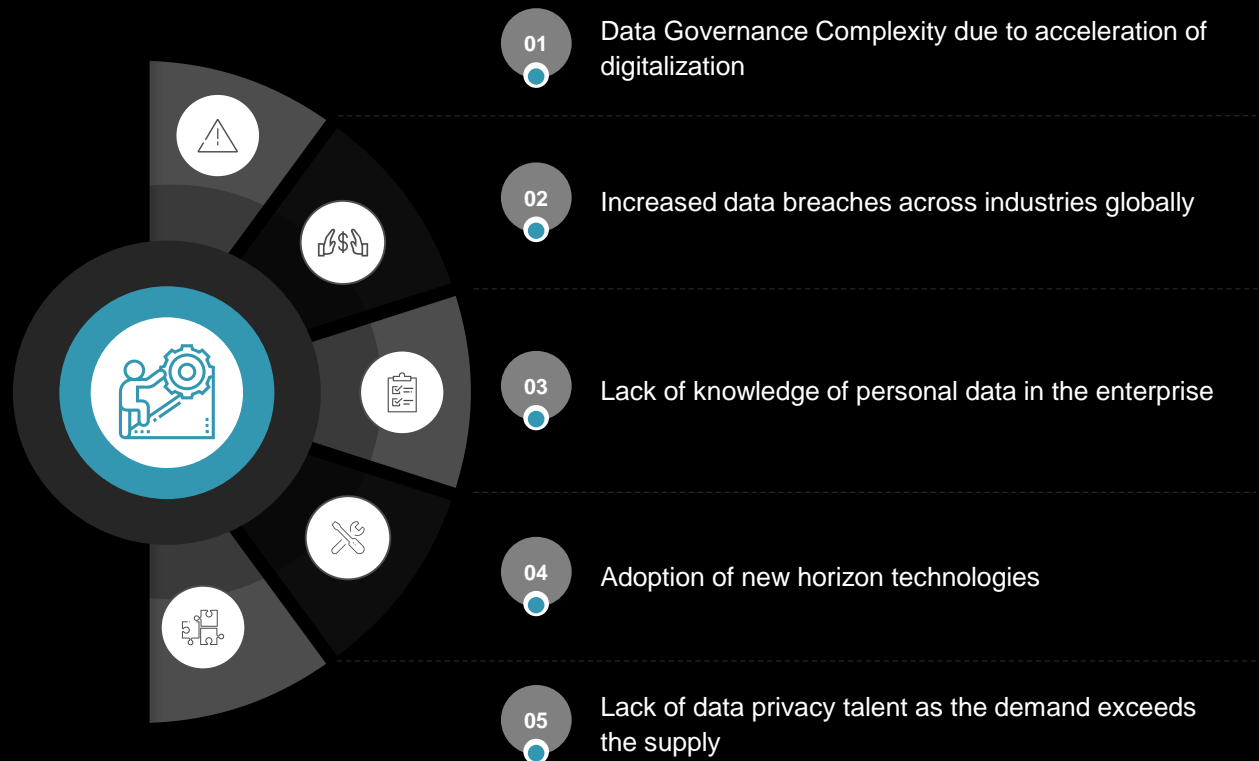

Comprehensive lifecycle management of protecting data in enterprise, cloud using controls such as discovery, anonymization, encryption etc.

Breach Notification & Reporting

Breach Notification & Reporting for 40+ data privacy acts using automated playbooks

Data Privacy Challenges

Key Data Privacy challenges

What We Hear in the Industry?

How Do I Make Sure –

- How to gain new insights from data and make better decisions, and to do so in a manner that protects individual privacy?
- How to provide individuals with new ways to exercise choice and control, especially where data uses most affect them?
- How to implement controls based on criticality of risk when there is lack of guidance from regulators?
- How to notify individuals when data is passively collected from machine to machine transactions?
- How do we ensure that there is no “bias” in decision making when processing personal data using AI & ML technologies?

Data Privacy Challenges Affecting 3E's

Experience

- Lack of knowledge/awareness of personal data in the enterprise; no single source of truth for personal data processing.
- Adoption of technologies like IoT, Blockchain, cloud, mobility poses new privacy risks
- Manual processes to manage data privacy requirements
- Inability to apply data privacy controls in fragmented and legacy systems

Efficiency

- Administrative activities in data privacy operations use up valuable time from the skilled privacy professional's daily schedule
- Lack of visibility into stakeholder functions (Business, IT, Compliance, Legal etc.) means silo'd operations and lack of process coverage
- Time consuming manual support for the business functions
- Inability to integrate privacy risk into overall enterprise risk and report your risk posture

Economics

- Limited scale of data privacy resources leads to inability to serve business; Adding resources results in increase in program cost
- Lack of objective and timely insights mean delayed decisions and elongated budgets.
- Support model with multiple dedicated teams mean an in-efficient and un-economic allocation of resources.
- Constraints in budget allocation result in data privacy solution being half-baked and ill-suited for purpose.

Data breaches are real and they result in loss of trust with your end customers. In this age of privacy, 'Trust' will be the factor that decides whether a business thrives or goes extinct, not 'service', or 'loyalty', or 'reputation'.

Our Guiding Principles and Approach

Our Solution Themes for Data Privacy

Experience

Consistency

- Standardized data privacy process and standards to cater to the needs of organization across various business units and functions

Flexibility

- Ability of the solution to dynamically adjust to the global data privacy requirements and compliance initiatives

Ease of Use

- Ability to Privacy by Design into the new products and services through a repeatable and sustainable process.

Efficiency

Intelligent Automation

- Using AI/ML capabilities in the data privacy operations means the efforts of the skilled privacy professionals are optimally utilized

A Common Risk language

- A uniform framework and standardized testing methodology means the ability to align with enterprise privacy management methodology

Integrated Processes

- Integrate the requirements of various stakeholders into the privacy management platform to ensure adequate and timely participation in decision making

Economics

Accelerate Decision making

- Objective insights from privacy impact assessments and control monitoring feeds mean that management can take risk-informed decisions

Scalability

- Build a process and data privacy platform that is easily scalable and can be leveraged to comply with ever evolving data privacy regulations

On-Tap Support

- A flexible support model means dynamic allocation of resources to support your varying workloads and requirements

Our solution themes enables organizations to leverage privacy as a brand differentiator

We enable organizations to build and sustain a scalable data privacy program through a robust privacy framework

Wipro's Privacy Framework

Our Data Privacy Framework allows organizations to design & implement a forward looking privacy program that will enable compliance to ever evolving privacy regulations.

Wipro's Approach

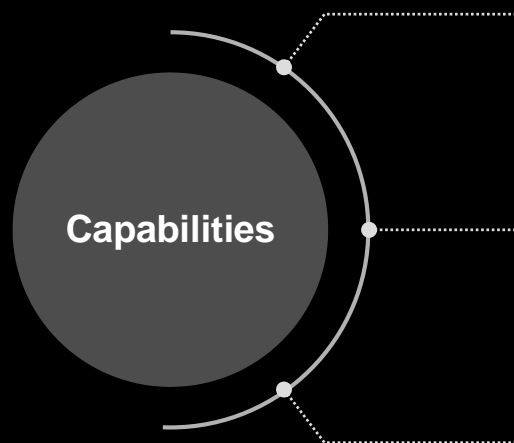

Microsoft Priva - Privacy Risk Mgmt Solution

Microsoft Priva - Introduction

Microsoft Privacy Risk Management solution that provides visibility into your organization's M365 privacy data and reduce risks through policies; Priva Subject Rights Requests feature provides automation and workflow tools for fulfilling data requests at scale.

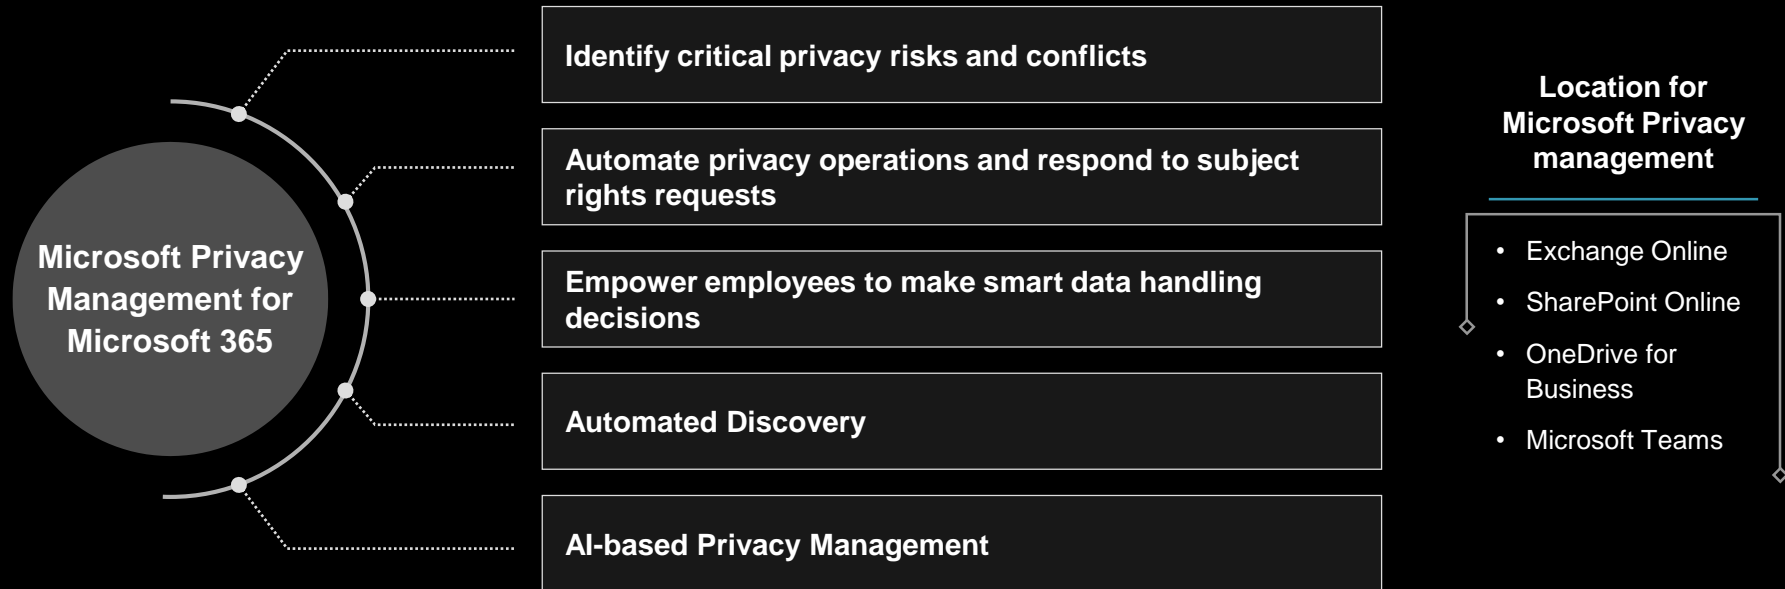

Identify critical privacy risks and conflicts

Automate privacy operations and response to subject rights requests

Empower employees to make smart data handling decisions

Microsoft Priva - Privacy Management solution for Microsoft 365

Organizations can see privacy related data status with volume, category, location, and movement of personal data in their Microsoft 365 environments. Additionally, they get visibility into the current status and trends of the associated privacy risks arising from personal data being overshared, transferred, or unused.

Microsoft Priva - Features

Automated Discovery

Privacy Management for Microsoft 365 **uses artificial intelligence** to assess privacy risks. It also has an automated discovery process whereby sensitive data get located.

AI-based Privacy Management

AI-based privacy management solution for Microsoft 365, which applies intelligence to quickly assess your organization's privacy risks and help anyone working with personal data make the right decisions.

Identify and protect against privacy risks

Proactively identify and protect against privacy risks such as data hoarding, data transfers, and data oversharing

Manage subject rights requests

Enable users to effectively manage data and take steps to comply with evolving privacy regulations Manage subject rights requests at scale

Find and visualize personal data

- Privacy management helps organizations to discover personal data automatically and provide key analytics and insights to admins to help them understand the privacy issues and associated risks in their organization. These insights are presented within your **Overview** dashboard, which provides automatic updates about your data with important trends, and the **data profile**, which allows you to explore ongoing analytics.
- **Gain visibility into the storage and movement of personal data**

Efficiently fulfill personal data requests

Privacy management provides you with the capability to automate **data subject rights** fulfillment with easy access to relevant data and customizable workflows that fit into existing business processes.

Integrate with Compliance Manager

Compliance Manager offers data protection and privacy assessment templates that correspond to compliance regulations and industry standards around the world. Taking steps in privacy management to protect the personal data you store can contribute to your privacy assessments in Compliance Manager and can help improve your compliance score.

Manage privacy risks at scale

Privacy management provides tools to detect these risks, establish policies and processes for remediation, and directly notify your users about issues and recommended actions to take.

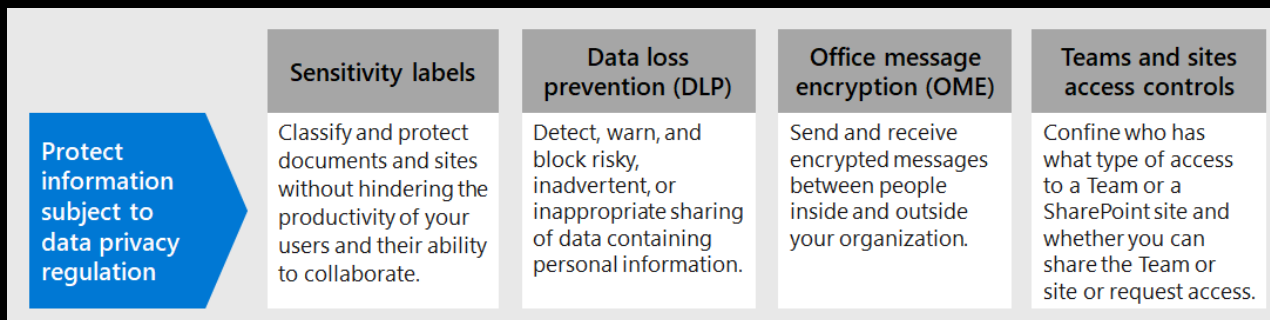

Built-in, customizable templates

Privacy management provides built-in, customizable templates for establishing ongoing policies tailored to these scenarios:

- **Overexposed personal data:** Discover open and over-privileged personal data in your organization and prioritize remediation efforts to secure data. Easily manage access rights to this data to protect privacy and prevent inappropriate use.
- **Data transfers:** Detect and manage transference of personal data between departments in your organization or across country or regional borders. This can help reduce the risk of data exposure, or of stepping out of accordance with privacy regulations and laws.
- **Data minimization:** Identify personal data that does not need to be retained and prioritize remediation efforts to delete this data.

Once set up, you can evaluate your data on an ongoing basis, receive alerts when policy matches are detected, and set up email notifications

Protect information subject to data privacy regulation

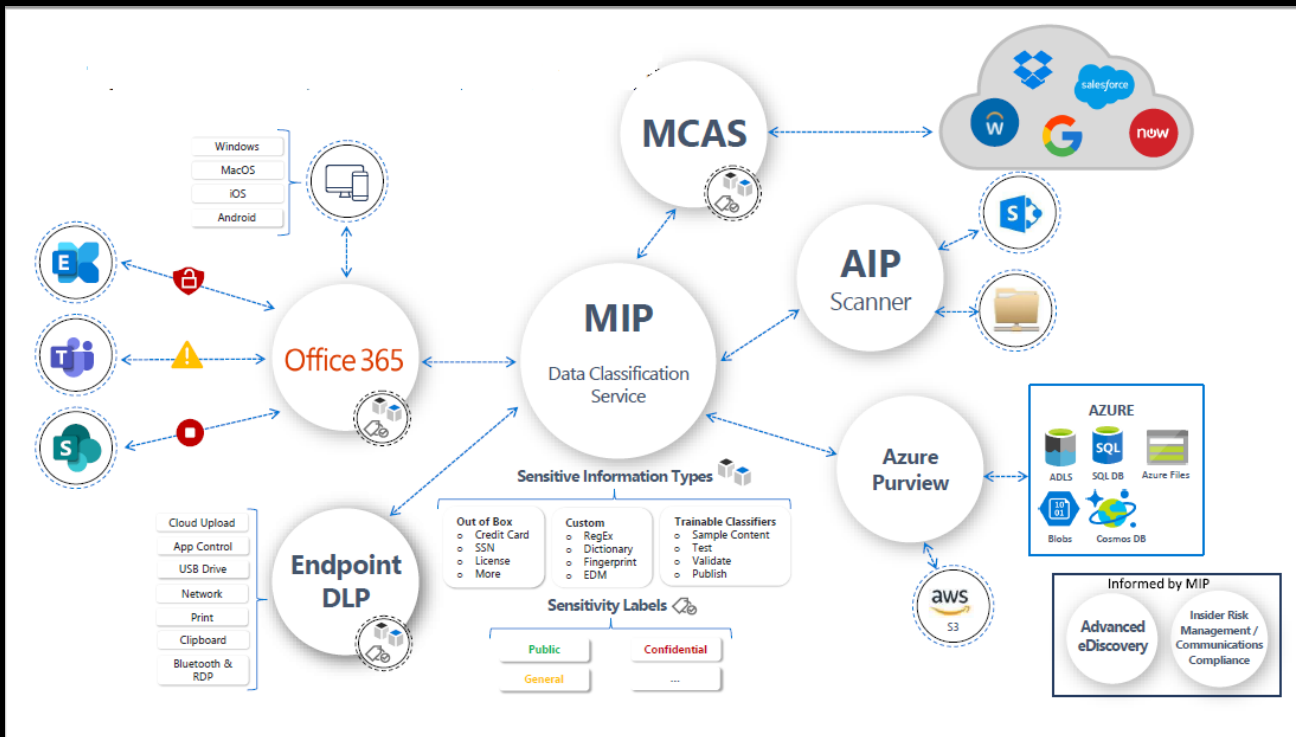

Data privacy regulations for information protection recommend:

- Protection against loss or unauthorized access, usage and/or transmission.
- Risk-based application of protective mechanisms.
- Use of encryption where appropriate.

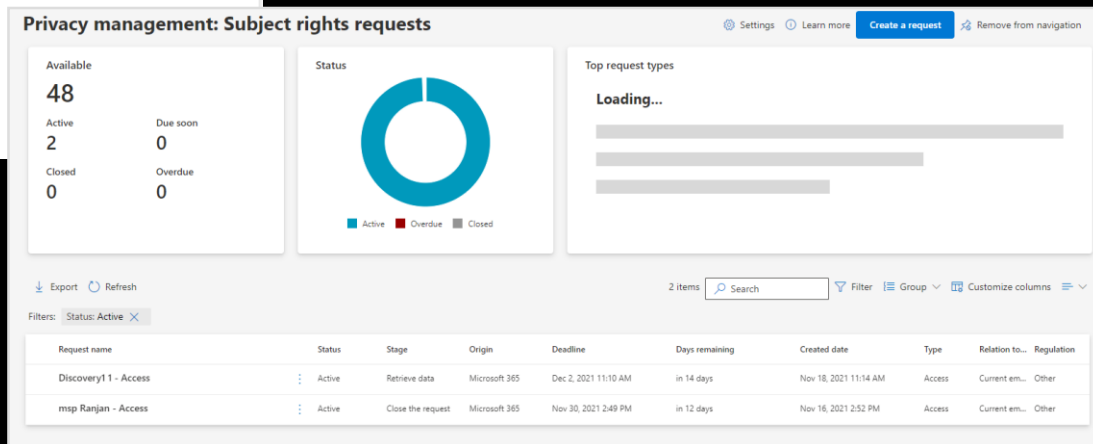

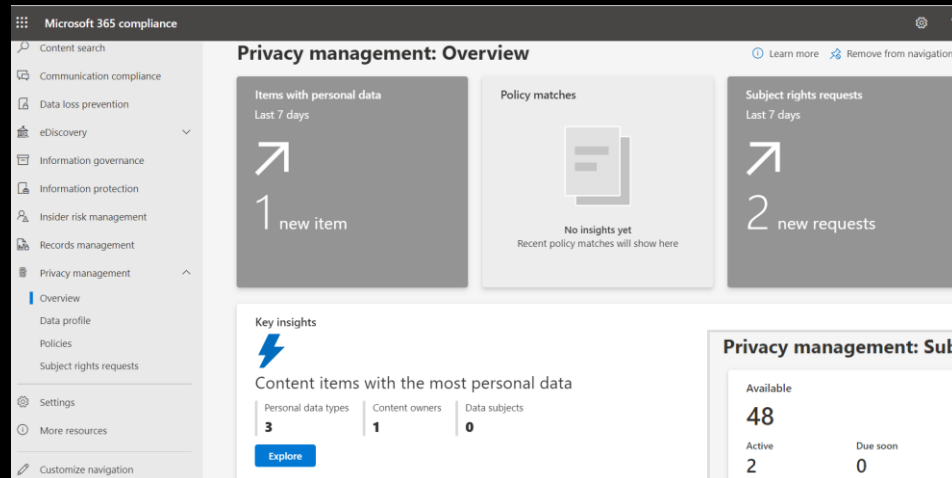

In Microsoft 365, information protection solutions include:

- Sensitive information types (described in the assess data privacy risks and identify sensitive items article)
- Sensitivity labels
 - Service/container-level
 - Client-side/content-level
 - Automated for data-at-rest in SharePoint and OneDrive
- Data Loss Prevention (DLP)
- Microsoft 365 Endpoint data loss prevention
- Office 365 Message Encryption new capabilities (OME) and OME Advanced Message Encryption

Wipro's Approach – By maturity

Baseline

- Identify PII processed by the Organization
- Build PII Inventory
- Build Privacy Policy and related privacy process and procedures
- Build privacy notices
- Conduct Gap Analysis/PIA
- Facilitate Data Subject Rights
- Maintain Records of Processing Activities
- Identify Privacy Risks and manage risks
- Manage consent and withdrawal of consent
- Manage Privacy Breach and notification
- Build privacy organization and governance
- Conduct Privacy Awareness and Training
- Conduct third party risk assessment.

Advanced

- Automate identification and maintenance of PII inventory
- Implement policies and procedures using tools to prevent data leakage and safeguard data
- Automate PIA, manage privacy risks.
- Automate DPIA for process meeting criteria.
- Automate privacy risk management
- Automate Data Subject Access Requests fulfillment process
- Automate or implement tool for breach management and notification
- Automate Cookie Preference management
- Conduct Privacy Awareness and training at predefined frequency.
- Automate third party risk assessment
- Set up Privacy Operations Center

Optimal

- Privacy Impact Assessments for applications & business processes
- Privacy audits and data privacy control testing
- Privacy awareness through gamification and online campaigns
- Data Subject Access Requests fulfillment
- Privacy by Design Audits, Privacy by Design guidance to business stakeholders.
- Build Regulatory and Compliance Intelligence
- Setup Privacy Operations center to manage updates to privacy policies, processes, conduct regular PIA, DPIA and audits, respond to privacy related queries from business and application teams.
