

Microsoft Entra Entitlement Management Quick Start

Deploy Azure AD control frameworks for managing entitlements to systems, environments, and data in a matter of weeks

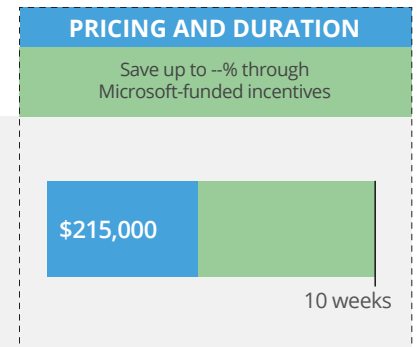

Organizations leveraging the Microsoft cloud for their business operations using M365 and Azure platforms, Azure native applications, or Azure-based infrastructure must be able to manage the entitlement to their systems, their environments, and their data for the different types of identities in the Azure Active Directory services. This can be accomplished effectively and efficiently by designing configurations within the Microsoft Azure Active Directory Entitlement Management toolset.

Quick Start options and pricing

The Azure Identity Entitlement Management Quick Start is a predictable and reliable program that allows you to immediately leverage your Microsoft investments. You'll receive high velocity, measurable outcomes and initial control frameworks for managing entitlements within Azure AD across three selected business units that are using Microsoft-supported environments, services, and applications—at a fixed price in a fixed time frame. After the Quick Start program completion, you will be positioned to scale additional business units and platforms.

- Allow users to request access to registered applications
- Allow application teams to manage application access requests and access durations
- Enforce conditional access and security policies for entitlement use
- Produce user behavior analytics by identity and application

Value-based deliverables

Deploy alerting policies for users being provisioned for group access, generating sharing links to sites and data, and accessing shared resources with an initial alert configuration in production

Create an initial asset catalog and access package for that catalog with access expiration configuration and access review workflows in production

Design a privileged identity management process for three business units and deliver an initial PIM configuration in production

Develop a production deployment of conditional access for each business unit and deliver an initial conditional access policy configuration
