INFORMATION SECURITY

Microsoft Endpoint Management Workshop

Support a diverse bring-your-own-device ecosystem

Mobile endpoints are increasing and risks are multiplying

More remote work is being performed on personal devices than ever before, creating massive risk management and productivity challenges for businesses.

As employees access data from their phones, tablets and laptops, organizations need to not only secure the data but the devices themselves before granting access. To maintain a high level of productivity, mobile security solutions must be simple and transparent to the users.

Enable secure and productive remote work with the Microsoft products you already own

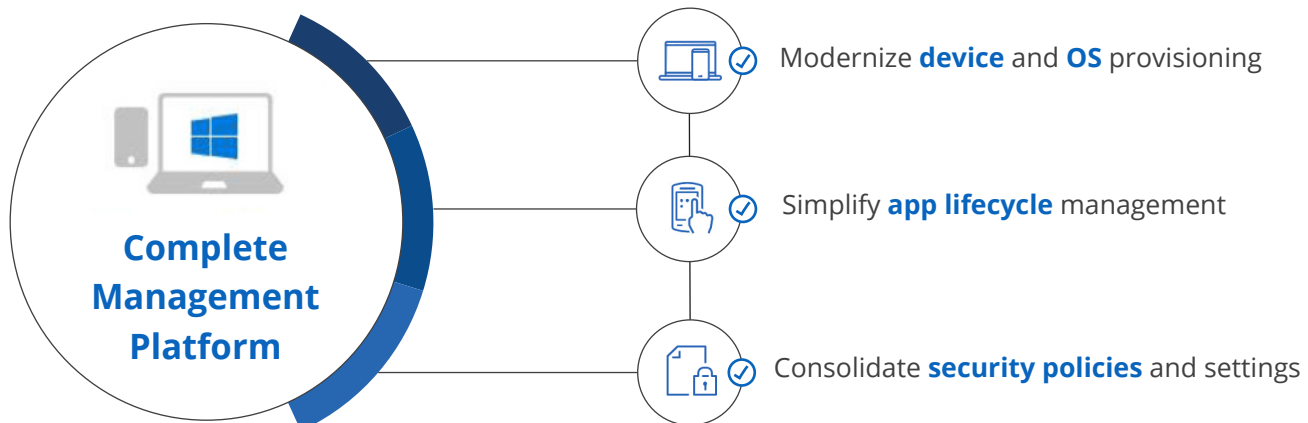

Edgile's Microsoft Endpoint Management workshop presents an executive deep dive into the remote deployment, management and security of corporate and personal devices—both on-premises and in the cloud.

Whether devices are Windows, Mac, Android or iOS, you'll learn how to unify security, apps, access, compliance and the end-user experience to create a holistic mobile threat defense solution using Microsoft Endpoint Manager. We'll show you how to get the most value from your Microsoft 365 integrated solutions.

Modern device management encompasses a wide range of areas including user protection, adding/removing devices, managed applications, end user support, and rolling out new capabilities."

– Forrester 2020 Microsoft 365 Enterprise Total Economic Impact Study

Manage and secure endpoints at the enterprise level

This timely workshop explores the best ways to manage endpoints at the enterprise level. We'll provide you with the ability to protect your authorized users' identities, enabling you to authenticate credentials and manage access while giving users the freedom to collaborate and boost productivity.

You'll learn how to:

- **Improve management capabilities** with Microsoft Endpoint Manager
- **Discover and protect endpoints** by enforcing policies and deploying security tools
- **Secure identities** with Zero Trust security controls, including multi-factor authentication and conditional access
- **Enable users to be productive** with the applications they need on the devices they want to use.

Who should attend

- Chief Information Security Officer (CISO)
- Chief Information Officer (CIO)
- Chief Security Officer (CSO)
- Endpoint and Device Management owners/decision makers
- Application business owners
- IT Security and Operations
- Security architects and engineers

We'll customize the workshop based on your organization's needs
