

SailPoint IdentityIQ on Microsoft Azure

# Modernize identity governance with cloud-hosted managed services

## Eliminate the burden of migrating to the cloud

Enterprises are embarking on digital transformation to maximize flexibility, scalability, and cost reductions. But as IT environments become increasingly complex, many organizations lack the expertise to migrate workloads to the cloud and manage cloud programs at scale.

Edgile, a SailPoint Partner of the Year and trusted Microsoft Gold security partner, offers an IdentityIQ on Microsoft Azure cloud-hosted managed service so you can limit infrastructure capital expenses. This provides you with best-in-class identity governance while eliminating the burden of migrating, operating, and updating cloud workloads across applications, data, security, and infrastructure.

## Realize the power of digital transformation

SailPoint's IdentityIQ governance platform manages your entire hybrid IT environment. IdentityIQ on Microsoft Azure helps companies in financial services, health care services and other industries realize the power of digital transformation and allow business units to operate at peak velocity while minimizing risk exposures. It allows security to be baked in to the cloud-hosted solution and redefines your business processes around brand trust and customer engagement.

### Automate access certification with IdentityIQ/Azure AD integration

SailPoint's identity governance capabilities, combined with Azure Active Directory's secure access and risk-based identity protection provides complete provisioning and lifecycle governance on-premises and in the cloud.

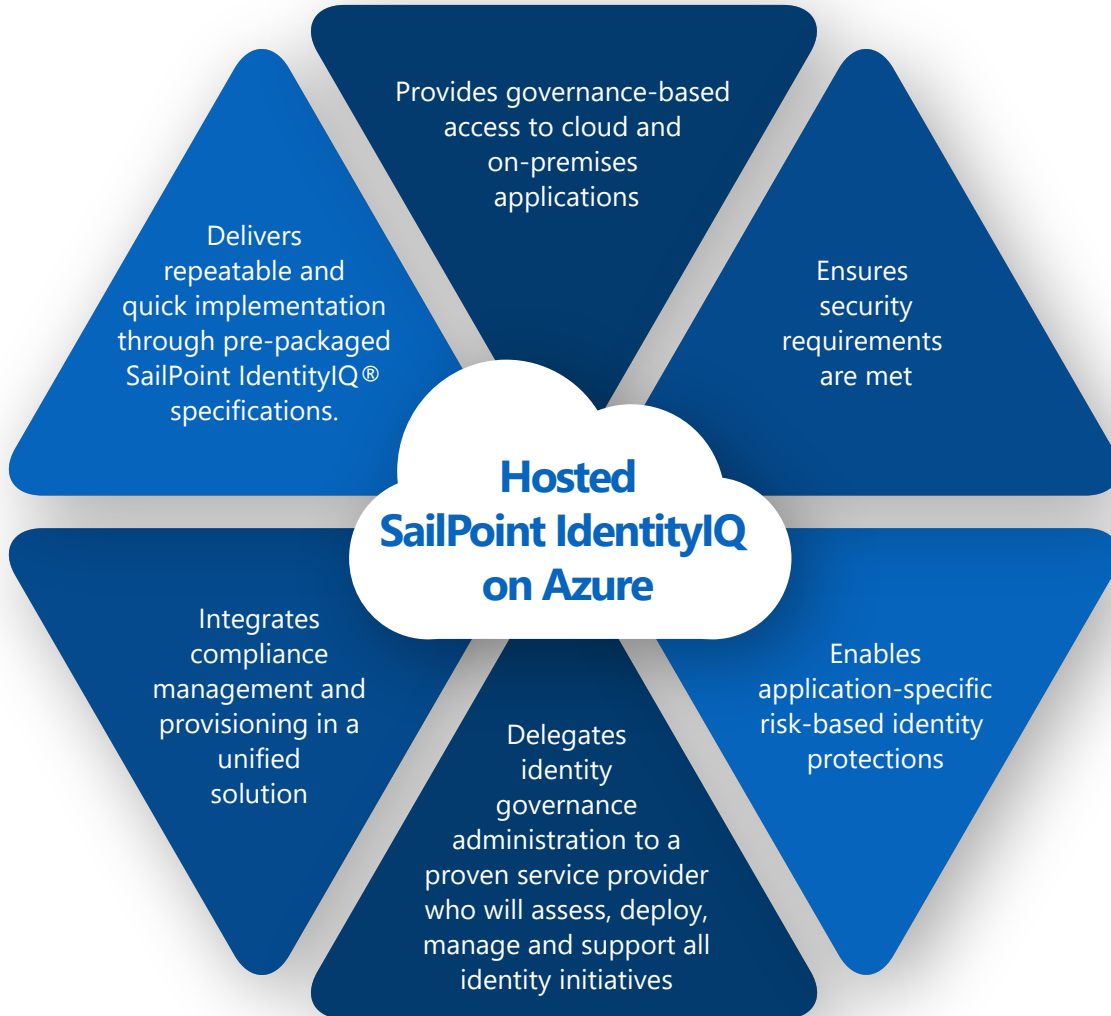

The Azure AD integration offers a simple and effective way to automate the entire access review and certification process for business and IT owners. Any access changes are automatically propagated to the Azure AD Access Panel.

This approach allows employee or personnel changes to be associated with synchronized applications. It also adds "segregation of duties" controls for end users to manage how responsibilities get shared within the organization.

# The Azure-hosted advantage managed by Edgile

Edgile's extensive SailPoint and Azure experience enables efficient interoperability between both systems for end-to-end identity governance administration. Our blend of functionality, scalability and managed services builds a complete cloud framework with multiple benefits to your organization.

Edgile will assist with Access Certification Readiness and IdentityIQ maintenance, including patch updates and minor upgrades and regressions testing. We will also diagnose scheduled task errors and suggest fixes.
