

# Uncover and secure your cloud apps for regulated companies

SAAS DATA SECURITY

## SaaS discovery, classification, and remediation

Companies understand that SaaS applications aren't always 100% secure, but often underestimate the size of the problem and don't know how to mitigate the risk. Establishing a forward looking SaaS security strategy—designed to address both current and future security needs—is the goal of an Edgile engagement.

Our discovery phase delivers quick visibility into the number and type of SaaS applications in use at your institution. We compare your profile to the list of officially permitted SaaS, and advise you on the risk and potential mitigation strategies, helping ensure data protection across your organization.

### Discovery

Deploy data gathering tools and review SaaS application types

### Classify

Develop institution's classification scale, e.g. "High Business Impact"

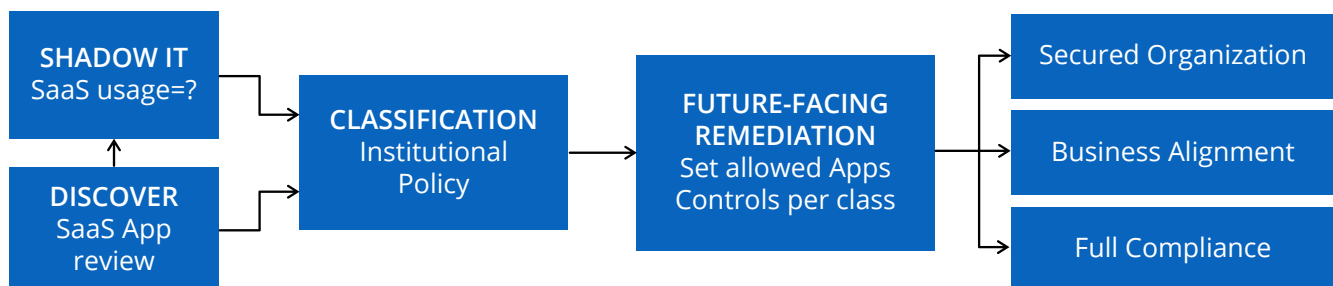

### Remediation

Set allowed Apps; Controls per class

## Moving to classified, authorized, and authenticated SaaS access

### Discovering risk leads to full compliance

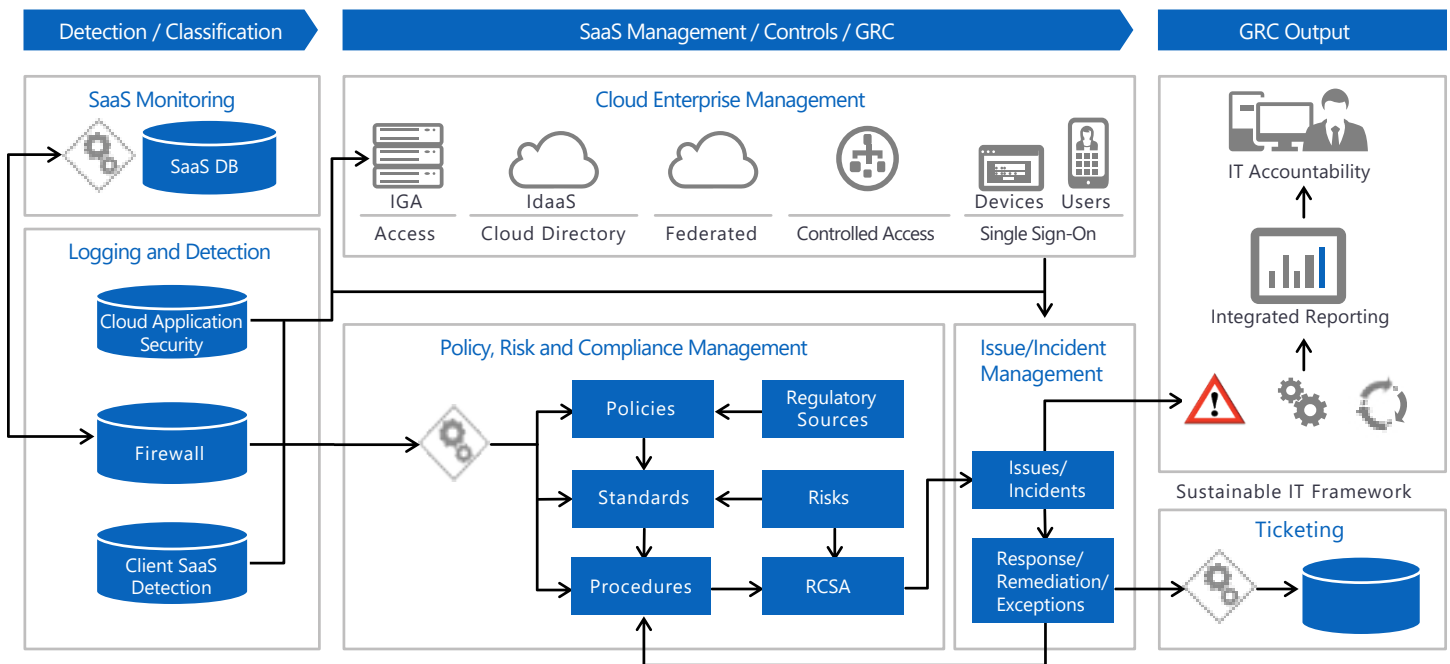

# SaaS remediation services

To help clients stay on top of constantly changing SaaS applications usage—while complying with regulatory requirements—our SaaS DCMRI and iGRC services provide industry-specific harmonized laws and regulations. Integration with existing client resources—across the enterprise—is enabled for government, banking, insurance, health and life sciences, retail and manufacturing, and energy organizations.

## SaaS holistic management system

Edgile delivers end-to-end SaaS Management with Evidence and Reporting

### Edgile: We Secure the Modern Enterprise<sup>SM</sup>
