

ZSCALER PARTNERSHIP

# Wipro Cyber X-Ray, powered by Zscaler

Empowering CXOs to make optimized security investment decisions

## Communicating cybersecurity investment values to the board can be challenging

Enterprise CXOs often struggle to access comprehensive cybersecurity risk visibility across their varied cyber projects. This makes it harder to justify the spending necessary to sustain cybersecurity programs and ensure continued cyber resilience in this age of continuous disruption.

As security teams are being asked to do more with less, what's needed is a security management solution that provides visibility into the organization's security posture and cyber maturity level.

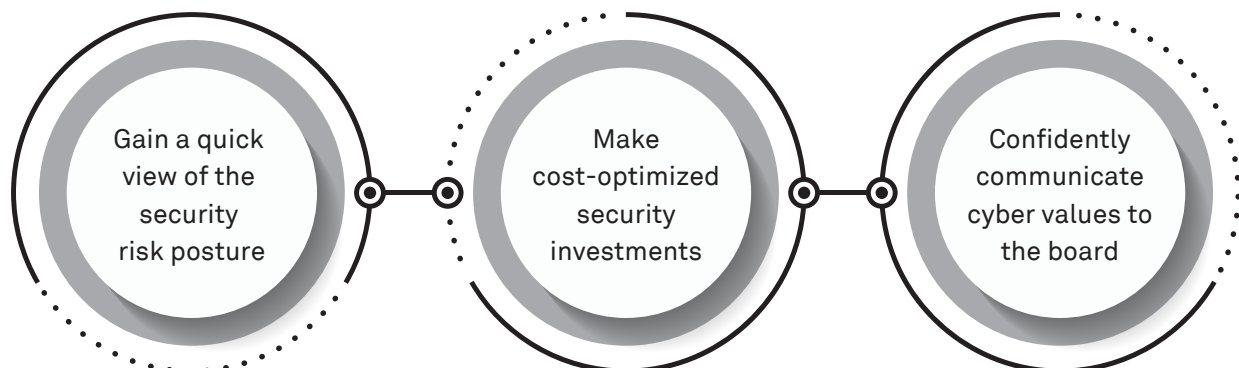

“Cybersecurity expertise in the boardroom ensures that a company makes strategic decisions that align with long-term business objectives.”

Wipro State of Cybersecurity  
Report 2023

## Introducing Wipro Cyber X-Ray — a cybersecurity risk insights and decision support solution

Wipro Cyber X-Ray, powered by Zscaler, is an AI-assisted security and risk platform that guides security leaders in making informed cybersecurity investment decisions based on various internal and external environmental factors. This innovative security solution provides business intelligence that enables security leaders to confidently communicate to the board the value of current cyber investments through a cost vs. impact analysis so they can be more agile in allocating appropriate cyber budgets.

### Visualize cyber posture so you can do more with less

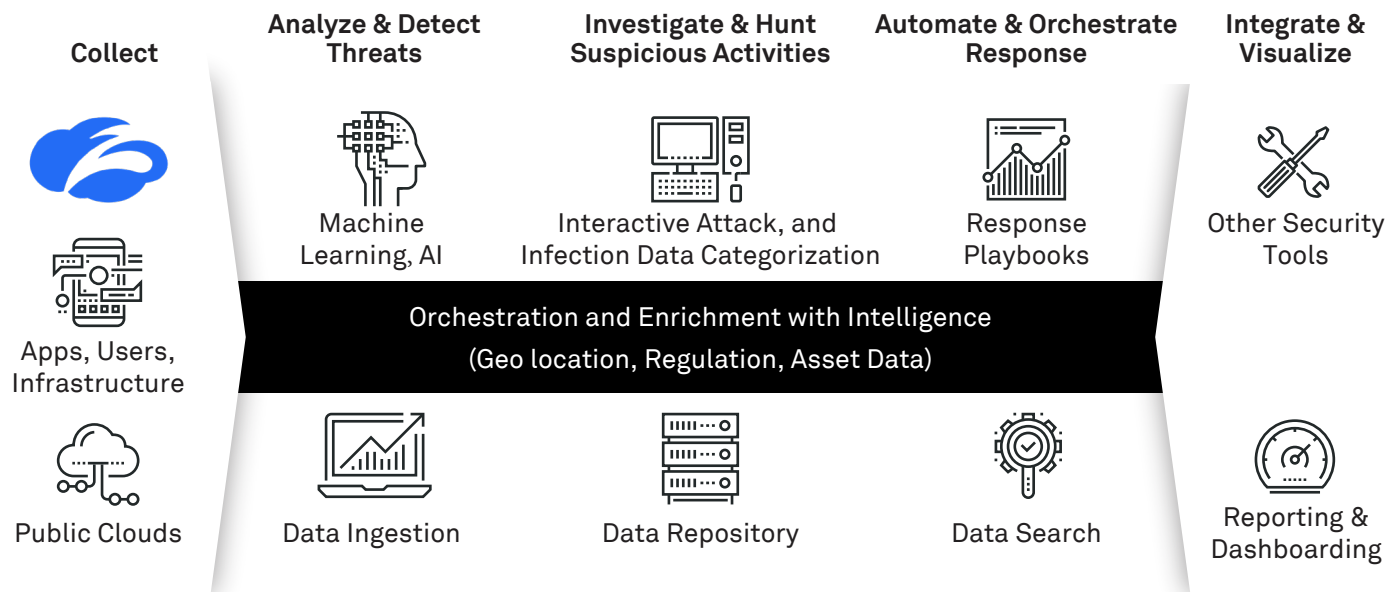

Cyber Cost Optimization | Next-Gen Security Operations

# A look at the Wipro Cyber X-Ray automated process

Telemetry data and alerts provided by the Zscaler product suite are integrated into Wipro's proprietary orchestration platform. This connects asset data with policies, controls, and risks to provide quantifiable impact and actionable insights for cyber leadership. With rich data at our disposal, Wipro equips clients with a full suite of cyber services, ranging from identification to remediation and recovery at an operational level.

Guided by Wipro Cybersecurists, the Cyber X-Ray platform harnesses the power of Zscaler logs (ZIA, ZDA, ZPA) and aggregates telemetry data, enabling the creation and classification of security incidents and effectively targeting policy violations. Cyber X-Ray uses pre-existing investments in Zscaler to deliver swift evaluations of security lapses in minutes. These evaluations are presented through a dashboard offering actionable insights and automating the workflows necessary to confirm and remediate compliance issues.

## Assessment benefits

- Single pane of glass visibility of the enterprise security risk posture
- Risk-based security investment decision making
- Outside-in and inside-out real-time monitoring of security posture
- Automation of configuration management
